FEMS Microbiology Reviews

# AUTHOR INDEX VOL. 15

Adams, M.W.W.
Biochemical diversity among sulfur-dependent, hyperthermophilic microorganisms (15) 261
Agudo, L.C., see Gozalbo, D. (15) 1
Akkermans, A.D.L., Mirza, M.S., Harmsen, H.J.M., Blok, H.J., Herron, P.R., Sessitsch, A. and Akkermans, W.M.
Molecular ecology of microbes: A review of promises, pitfalls and true progress (15) 185
Akkermans, W.M., see Akkermans, A.D.L. (15) 185
Appeldoorn, K.J., see Kortstee, G.J.J. (15) 137

Blok, H.J., see Akkermans, A.D.L. (15) 185
Bonch-Osmolovskaya, E.A.
Bacterial sulfur reduction in hot vents (15) 65
Bonting, C.F.C., see Kortstee, G.J.J. (15) 137
Bouwer, E., Durant, N., Wilson, L., Zhang, W. and Cunningham, A.
Degradation of xenobiotic compounds in situ: Capabilities and limits (15) 307
Brown, S.W., see Mendoza-Vega, O. (15) 369

Cervantes, C., Ji, G., Ramírez, J.L. and Silver, S.
Resistance to arsenic compounds in microorganisms (15) 355
Colson, C., see Jaeger, K.-E. (15) 29
Cook, A.M., see Kertesz, M.A. (15) 195
Cunningham, A., see Bouwer, E. (15) 307

De Vos, W.M. and Vaughan, E.E.
Genetics of lactose utilization in lactic acid bacteria (15) 217
Dijkstra, B.W., see Jaeger, K.-E. (15) 29
Dolfing, J., see Pries, F. (15) 279
Durant, N., see Bouwer, E. (15) 307

Eggen, R.I.L.
Regulated gene expression in methanogens (15) 251
Ekelund, F. and Rønn, R.
Notes on protozoa in agricultural soil with emphasis on heterotrophic flagellates and naked amoebae and their ecology (15) 321

Friedrich, M., see Schink, B. (15) 85

Galinski, E.A. and Trüper, H.G.
Microbial behaviour in salt-stressed ecosystems (15) 95
Gozalbo, D. and Agudo, L.C.
Differential expression of *SUC* genes: A question of bases (15) 1

Harmsen, H.J.M., see Akkermans, A.D.L. (15) 185
Herron, P.R., see Akkermans, A.D.L. (15) 185
Hofstra, H., Van der Vossen, J.M.B.M. and Van der Plas, J.
Microbes in food processing technology (15) 175
Holliger, C. and Schraa, G.
Physiological meaning and potential for application of reductive dechlorination by anaerobic bacteria (15) 297
Hulshoff Pol, L.W., see Oude Elferink, S.J.W.H. (15) 119

Jaeger, K.-E., Ransac, S., Dijkstra, B.W., Colson, C., Van Heuvel, M. and Misset, O.
Bacterial lipases (15) 29
Janssen, D.B., see Pries, F. (15) 279
Ji, G., see Cervantes, C. (15) 355

Kertesz, M.A., Cook, A.M. and Leisinger, T.
Microbial metabolism of sulfur- and phosphorus-containing xenobiotics (15) 195
Kolli, B.K., see Varma, A. (15) 9
König, H., see Varma, A. (15) 9
Kortstee, G.J.J., Appeldoorn, K.J., Bonting, C.F.C., Van Niel, E.W.J. and Van Veen, H.W.
Biology of polyphosphate-accumulating bacteria involved in enhanced biological phosphorus removal (15) 137
Kuenen, J.G. and Robertson, L.A.
Combined nitrification-denitrification processes (15) 109

Leisinger, T., see Kertesz, M.A. (15) 195
Ludwig, W. and Schleifer, K.H.
Bacterial phylogeny based on 16S and 23S rRNA sequence analysis (15) 155

Mendoza-Vega, O., Sabatié, J. and Brown, S.W.
Industrial production of heterologous proteins by fed-batch cultures of the yeast *Saccharomyces cerevisiae* (15) 369
Mirza, M.S., see Akkermans, A.D.L. (15) 185
Misset, O., see Jaeger, K.-E. (15) 29

Oude Elferink, S.J.W.H., Visser, A., Hulshoff Pol, L.W. and Stams, A.J.M.
Sulfate reduction in methanogenic bioreactors (15) 119

Paul, J., see Varma, A. (15) 9
Pries, F., Van der Ploeg, J.R., Dolfing, J. and Janssen, D.B.
Degradation of halogenated aliphatic compounds: The role of adaptation (15) 279

Ramírez, J.L., see Cervantes, C. (15) 355
Ransac, S., see Jaeger, K.-E. (15) 29

Robertson, L.A., see Kuenen, J.G. (15) 109
Rønn, R., see Ekelund, F. (15) 321

Sabatié, J., see Mendoza-Vega, O. (15) 369
Saxena, S., see Varma, A. (15) 9
Schink, B. and Friedrich, M.
Energetics of syntrophic fatty acid oxidation (15) 85
Schleifer, K.H., see Ludwig, W. (15) 155
Schraa, G., see Holliger, C. (15) 297
Sessitsch, A., see Akkermans, A.D.L. (15) 185
Silver, S., see Cervantes, C. (15) 355
Stams, A.J.M., see Oude Elferink, S.J.W.H. (15) 119

Trüper, H.G., see Galinski, E.A. (15) 95

Van der Meer, J.R.
Genetic adaptation of bacteria to chlorinated aromatic compounds (15) 239
Van der Plas, J., see Hofstra, H. (15) 175
Van der Ploeg, J.R., see Pries, F. (15) 279
Van der Vossen, J.M.B.M., see Hofstra, H. (15) 175
Van Heuvel, M., see Jaeger, K.-E. (15) 29
Van Niel, E.W.J., see Kortstee, G.J.J. (15) 137
Van Veen, H.W., see Kortstee, G.J.J. (15) 137
Varma, A., Kolli, B.K., Paul, J., Saxena, S. and König, H.
Lignocellulose degradation by microorganisms from termite hills and termite guts: A survey on the present state of art (15) 9
Vaughan, E.E., see De Vos, W.M. (15) 217
Visser, A., see Oude Elferink, S.J.W.H. (15) 119

Wilson, L., see Bouwer, E. (15) 307

Zhang, W., see Bouwer, E. (15) 307

FEMS Microbiology Reviews

# SUBJECT INDEX VOL. 15

**Acetate**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

***Acinetobacter***
Phosphorus removal; Polyphosphate; Biosynthesis; Degradation; Phosphate transport; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Adaptation**
Lactose operons; Galactose genes; Gene expression; Gram-positive bacteria (De Vos, W.M. (15) 217)

Pseudomonads; Chlorinated aromatic compounds; Evolution (Van der Meer, J.R. (15) 239)

Evolution; Dehalogenase; Chloroacetate; 1,2-Dichloroethane; Trichloroethylene (Pries, F. (15) 279)

**Algae**
Arsenic efflux; Toxicity; Resistance; Plasmid resistances; Fungi (Cervantes, C. (15) 355)

**Anaerobic bacteria**
Reductive dechlorination; Co-metabolic activity; Respiration; Substrate specificity (Holliger, C. (15) 297)

**Anaerobic conditions**
Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Anaerobic destruction**
Bacterial sulfur reduction; Hot vents; Thermophiles (Bonch-Osmolovskaya, E.A. (15) 65)

**Archaea**
Transcription; Induction; Repression; Methanogenic bacteria (Eggen, R.I.L. (15) 251)

Hyperthermophiles; Fermentation; Glycolysis; Sulfur reduction; Hydrogen production; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Arsenic efflux**
Toxicity; Resistance; Plasmid resistances; Fungi; Algae (Cervantes, C. (15) 355)

**Bacterial sulfur reduction**
Hot vents; Thermophiles; Anaerobic destruction (Bonch-Osmolovskaya, E.A. (15) 65)

**Biodegradation**
Xenobiotics; Phosphorus metabolism; Sulfur metabolism; Global regulation (Kertesz, M.A. (15) 195)

In situ bioremediation; Organic contaminants; Performance; Limitations; Sorption/desorption (Bouwer, E. (15) 307)

**Biological energy quantum**
Interspecies hydrogen transfer; Reversed electron transport; Syntrophy; Fatty acids; Energetics; Glycolate (Schink, B. (15) 85)

**Bioprocess design**
*Saccharomyces cerevisiae*; Fed batch; Microbial physiology; Genetics (Mendoza-Vega, O. (15) 369)

**Biosynthesis**
Phosphorus removal; *Acinetobacter*; Polyphosphate; Degradation; Phosphate transport; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Biotechnological applications**
Lipase (EC 3.1.1.3); Mechanism of secretion; Interfacial activation; Three-dimensional structure; Virulence factor (Jaeger, K.-E. (15) 29)

**Butyrate**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Chlorinated aromatic compounds**
Adaptation; Pseudomonads; Evolution (Van der Meer, J.R. (15) 239)

**Chloroacetate**
Adaptation; Evolution; Dehalogenase; 1,2-Dichloroethane; Trichloroethylene (Pries, F. (15) 279)

**Co-metabolic activity**
Reductive dechlorination; Anaerobic bacteria; Respiration; Substrate specificity (Holliger, C. (15) 297)

**Compatible solute**
Halophilic/halotolerant bacteria; Osmolyte; Osmoadaptation; Enzyme stabilization; Stress protection; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Degradation**
Phosphorus removal; *Acinetobacter*; Polyphosphate; Biosynthesis; Phosphate transport; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Dehalogenase**
Adaptation; Evolution; Chloroacetate; 1,2-Dichloroethane; Trichloroethylene (Pries, F. (15) 279)

**Denitrification**
Nitrification; $N_2O$; $N_2$; Wastewater (Kuenen, J.G. (15) 109)

**Detection**
Microorganisms; Food processing; HACCP; DNA amplification; Strain typing (Hofstra, H. (15) 175)

**Detrital food web**
Soil protozoa; Naked amoebae; Heterotrophic flagellates; Mineralization; Rhizosphere (Ekelund, F. (15) 321)

**1,2-Dichloroethane**
Adaptation; Evolution; Dehalogenase; Chloroacetate; Trichloroethylene (Pries, F. (15) 279)

**DNA amplification**
Microorganisms; Food processing; HACCP; Detection; Strain typing (Hofstra, H. (15) 175)

**Efflux**
Phosphorus removal; *Acinetobacter*; Polyphosphate; Biosynthesis; Degradation; Phosphate transport; Uptake (Kortstee, G.J.J. (15) 137)

**Energetics**
Interspecies hydrogen transfer; Reversed electron transport; Syntrophy; Biological energy quantum; Fatty acids; Glycolate (Schink, B. (15) 85)

**Enzyme stabilization**
Halophilic/halotolerant bacteria; Compatible solute; Osmolyte; Osmoadaptation; Stress protection; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Evolution**
Adaptation; Pseudomonads; Chlorinated aromatic compounds (Van der Meer, J.R. (15) 239)

Adaptation; Dehalogenase; Chloroacetate; 1,2-Dichloroethane; Trichloroethylene (Pries, F. (15) 279)

**Fatty acids**
Interspecies hydrogen transfer; Reversed electron transport; Syntrophy; Biological energy quantum; Energetics; Glycolate (Schink, B. (15) 85)

**Fed batch**
*Saccharomyces cerevisiae*; Microbial physiology; Genetics; Bioprocess design (Mendoza-Vega, O. (15) 369)

**Fermentation**
Hyperthermophiles; Archaea; Glycolysis; Sulfur reduction; Hydrogen production; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Food processing**
Microorganisms; HACCP; Detection; DNA amplification; Strain typing (Hofstra, H. (15) 175)

***Frankia***
Oligonucleotide probes; *Streptomyces*; *Syntrophobacter*; In situ hybridization (Akkermans, A.D.L. (15) 185)

**Fungi**
Arsenic efflux; Toxicity; Resistance; Plasmid resistances; Algae (Cervantes, C. (15) 355)

**Galactose genes**
Lactose operons; Gene expression; Adaptation; Gram-positive bacteria (De Vos, W.M. (15) 217)

**Gene expression**
Lactose operons; Galactose genes; Adaptation; Gram-positive bacteria (De Vos, W.M. (15) 217)

**Genetics**
*Saccharomyces cerevisiae*; Fed batch; Microbial physiology; Bioprocess design (Mendoza-Vega, O. (15) 369)

**Global regulation**
Xenobiotics; Biodegradation; Phosphorus metabolism; Sulfur metabolism (Kertesz, M.A. (15) 195)

**Glucose repression**
*Saccharomyces*; Invertase; Yeast promoter; Nucleotide sequence (Gozalbo, D. (15) 1)

**Glycolate**
Interspecies hydrogen transfer; Reversed electron transport; Syntrophy; Biological energy quantum; Fatty acids; Energetics (Schink, B. (15) 85)

**Glycolysis**
Hyperthermophiles; Archaea; Fermentation; Sulfur reduction; Hydrogen production; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Gram-positive bacteria**
Lactose operons; Galactose genes; Gene expression; Adaptation (De Vos, W.M. (15) 217)

**HACCP**
Microorganisms; Food processing; Detection; DNA amplification; Strain typing (Hofstra, H. (15) 175)

**Halophilic/halotolerant bacteria**
Compatible solute; Osmolyte; Osmoadaptation; Enzyme stabilization; Stress protection; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Heterotrophic flagellates**
Soil protozoa; Naked amoebae; Detrital food web; Mineralization; Rhizosphere (Ekelund, F. (15) 321)

**Hot vents**
Bacterial sulfur reduction; Thermophiles; Anaerobic destruction (Bonch-Osmolovskaya, E.A. (15) 65)

**Hydrogen**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Hydrogen production**
Hyperthermophiles; Archaea; Fermentation; Glycolysis; Sulfur reduction; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Hyperthermophiles**
Archaea; Fermentation; Glycolysis; Sulfur reduction; Hydrogen production; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Identification**
16S rRNA; 23S rRNA; Phylogeny; Systematics (Ludwig, W. (15) 155)

**Induction**
Transcription; Repression; Methanogenic bacteria; Archaea (Eggen, R.I.L. (15) 251)

**In situ bioremediation**
Organic contaminants; Performance; Limitations; Biodegradation; Sorption/desorption (Bouwer, E. (15) 307)

**In situ hybridization**
Oligonucleotide probes; *Frankia*; *Streptomyces*; *Syntrophobacter* (Akkermans, A.D.L. (15) 185)

**Interfacial activation**
Lipase (EC 3.1.1.3); Mechanism of secretion; Three-dimensional structure; Virulence factor; Biotechnological applications (Jaeger, K.-E. (15) 29)

**Interspecies electron transfer**
Anaerobic conditions; Sulfate reduction; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Interspecies hydrogen transfer**
Reversed electron transport; Syntrophy; Biological energy quantum; Fatty acids; Energetics; Glycolate (Schink, B. (15) 85)

**Intestinal flora**
Lignocellulose degradation; Termite; Soil flora; Symbiosis (Varma, A. (15) 9)

**Invertase**
*Saccharomyces*; Yeast promoter; Nucleotide sequence; Glucose repression (Gozalbo, D. (15) 1)

**Lactose operons**
Galactose genes; Gene expression; Adaptation; Gram-positive bacteria (De Vos, W.M. (15) 217)

**Lignocellulose degradation**
Termite; Intestinal flora; Soil flora; Symbiosis (Varma, A. (15) 9)

**Limitations**
In situ bioremediation; Organic contaminants; Performance; Biodegradation; Sorption/desorption (Bouwer, E. (15) 307)

**Lipase (EC 3.1.1.3)**
Mechanism of secretion; Interfacial activation; Three-dimensional structure; Virulence factor; Biotechnological applications (Jaeger, K.-E. (15) 29)

**Mechanism of secretion**
Lipase (EC 3.1.1.3); Interfacial activation; Three-dimensional structure; Virulence factor; Biotechnological applications (Jaeger, K.-E. (15) 29)

**Methanogenesis**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Methanogenic bacteria**
Transcription; Induction; Repression; Archaea (Eggen, R.I.L. (15) 251)

**Methanogenic degradation**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Microbial physiology**
*Saccharomyces cerevisiae*; Fed batch; Genetics; Bioprocess design (Mendoza-Vega, O. (15) 369)

**Microorganisms**
Food processing; HACCP; Detection; DNA amplification; Strain typing (Hofstra, H. (15) 175)

**Mineralization**
Soil protozoa; Naked amoebae; Heterotrophic flagellates; Detrital food web; Rhizosphere (Ekelund, F. (15) 321)

**$N_2$**
Nitrification; Denitrification; $N_2O$; Wastewater (Kuenen, J.G. (15) 109)

**Naked amoebae**
Soil protozoa; Heterotrophic flagellates; Detrital food web; Mineralization; Rhizosphere (Ekelund, F. (15) 321)

**Nitrification**
Denitrification; $N_2O$; $N_2$; Wastewater (Kuenen, J.G. (15) 109)

**$N_2O$**
Nitrification; Denitrification; $N_2$; Wastewater (Kuenen, J.G. (15) 109)

**Nucleotide sequence**
*Saccharomyces*; Invertase; Yeast promoter; Glucose repression (Gozalbo, D. (15) 1)

**Oligonucleotide probes**
*Frankia*; *Streptomyces*; *Syntrophobacter*; In situ hybridization (Akkermans, A.D.L. (15) 185)

**Organic contaminants**
In situ bioremediation; Performance; Limitations; Biodegradation; Sorption/desorption (Bouwer, E. (15) 307)

**Osmoadaptation**
Halophilic/halotolerant bacteria; Compatible solute; Osmolyte; Enzyme stabilization; Stress protection; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Osmolyte**
Halophilic/halotolerant bacteria; Compatible solute; Osmoadaptation; Enzyme stabilization; Stress protection; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Performance**
In situ bioremediation; Organic contaminants; Limitations; Biodegradation; Sorption/desorption (Bouwer, E. (15) 307)

**Phosphate transport**
Phosphorus removal; *Acinetobacter*; Polyphosphate; Biosynthesis; Degradation; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Phosphorus metabolism**
Xenobiotics; Biodegradation; Sulfur metabolism; Global regulation (Kertesz, M.A. (15) 195)

**Phosphorus removal**
*Acinetobacter*; Polyphosphate; Biosynthesis; Degradation; Phosphate transport; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Phylogeny**
16S rRNA; 23S rRNA; Identification; Systematics (Ludwig, W. (15) 155)

**Plasmid resistances**
Arsenic efflux; Toxicity; Resistance; Fungi; Algae (Cervantes, C. (15) 355)

**Polyphosphate**
Phosphorus removal; *Acinetobacter*; Biosynthesis; Degradation; Phosphate transport; Uptake; Efflux (Kortstee, G.J.J. (15) 137)

**Propionate**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Pseudomonads**
Adaptation; Chlorinated aromatic compounds; Evolution (Van der Meer, J.R. (15) 239)

***Pyrococcus furiosus***
Hyperthermophiles; Archaea; Fermentation; Glycolysis; Sulfur reduction; Hydrogen production; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Reductive dechlorination**
Anaerobic bacteria; Co-metabolic activity; Respiration; Substrate specificity (Holliger, C. (15) 297)

**Repression**
Transcription; Induction; Methanogenic bacteria; Archaea (Eggen, R.I.L. (15) 251)

**Resistance**
Arsenic efflux; Toxicity; Plasmid resistances; Fungi; Algae (Cervantes, C. (15) 355)

**Respiration**
Reductive dechlorination; Anaerobic bacteria; Co-metabolic activity; Substrate specificity (Holliger, C. (15) 297)

**Reversed electron transport**
Interspecies hydrogen transfer; Syntrophy; Biological energy quantum; Fatty acids; Energetics; Glycolate (Schink, B. (15) 85)

**Rhizosphere**
Soil protozoa; Naked amoebae; Heterotrophic flagellates; Detrital food web; Mineralization (Ekelund, F. (15) 321)

***Saccharomyces***
Invertase; Yeast promoter; Nucleotide sequence; Glucose repression (Gozalbo, D. (15) 1)

***Saccharomyces cerevisiae***
Fed batch; Microbial physiology; Genetics; Bioprocess design (Mendoza-Vega, O. (15) 369)

**Soil flora**
Lignocellulose degradation; Termite; Intestinal flora; Symbiosis (Varma, A. (15) 9)

**Soil protozoa**
Naked amoebae; Heterotrophic flagellates; Detrital food web; Mineralization; Rhizosphere (Ekelund, F. (15) 321)

**Sorption/desorption**
In situ bioremediation; Organic contaminants; Performance; Limitations; Biodegradation (Bouwer, E. (15) 307)

**16S rRNA**
23S rRNA; Identification; Phylogeny; Systematics (Ludwig, W. (15) 155)

**23S rRNA**
16S rRNA; Identification; Phylogeny; Systematics (Ludwig, W. (15) 155)

**Strain typing**
Microorganisms; Food processing; HACCP; Detection; DNA amplification (Hofstra, H. (15) 175)

***Streptomyces***
Oligonucleotide probes; *Frankia*; *Syntrophobacter*; In situ hybridization (Akkermans, A.D.L. (15) 185)

**Stress protection**
Halophilic/halotolerant bacteria; Compatible solute; Osmolyte; Osmoadaptation; Enzyme stabilization; Synthesis/uptake/excretion of solutes (Galinski, E.A. (15) 95)

**Substrate specificity**
Reductive dechlorination; Anaerobic bacteria; Co-metabolic activity; Respiration (Holliger, C. (15) 297)

**Sulfate reduction**
Anaerobic conditions; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Sulfide toxicity**
Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Syntrophy (Oude Elferink, S.J.W.H. (15) 119)

**Sulfur metabolism**
Xenobiotics; Biodegradation; Phosphorus metabolism; Global regulation (Kertesz, M.A. (15) 195)

**Sulfur reduction**
Hyperthermophiles; Archaea; Fermentation; Glycolysis; Hydrogen production; *Pyrococcus furiosus*; *Thermotoga maritima* (Adams, M.W.W. (15) 261)

**Symbiosis**
Lignocellulose degradation; Termite; Intestinal flora; Soil flora (Varma, A. (15) 9)

**Synthesis/uptake/excretion of solutes**
Halophilic/halotolerant bacteria; Compatible solute; Osmolyte; Osmoadaptation; Enzyme stabilization; Stress protection (Galinski, E.A. (15) 95)

***Syntrophobacter***
Oligonucleotide probes; *Frankia*; *Streptomyces*; In situ hybridization (Akkermans, A.D.L. (15) 185)

**Syntrophy**
Interspecies hydrogen transfer; Reversed electron transport; Biological energy quantum; Fatty acids; Energetics; Glycolate (Schink, B. (15) 85)

Anaerobic conditions; Sulfate reduction; Interspecies electron transfer; Methanogenic degradation; Methanogenesis; Acetate; Propionate; Butyrate; Hydrogen; Sulfide toxicity (Oude Elferink, S.J.W.H. (15) 119)

**Systematics**
16S rRNA; 23S rRNA; Identification; Phylogeny (Ludwig, W. (15) 155)

**Termite**
Lignocellulose degradation; Intestinal flora; Soil flora; Symbiosis (Varma, A. (15) 9)

**Thermophiles**
Bacterial sulfur reduction; Hot vents; Anaerobic destruction (Bonch-Osmolovskaya, E.A. (15) 65)

***Thermotoga maritima***
Hyperthermophiles; Archaea; Fermentation; Glycolysis; Sulfur reduction; Hydrogen production; *Pyrococcus furiosus* (Adams, M.W.W. (15) 261)

**Three-dimensional structure**
Lipase (EC 3.1.1.3); Mechanism of secretion; Interfacial activation; Virulence factor; Biotechnological applications (Jaeger, K.-E. (15) 29)

**Toxicity**
Arsenic efflux; Resistance; Plasmid resistances: Fungi; Algae (Cervantes, C. (15) 355)

**Transcription**
Induction; Repression; Methanogenic bacteria; Archaea (Eggen, R.I.L. (15) 251)

**Trichloroethylene**
Adaptation; Evolution; Dehalogenase; Chloroacetate; 1,2-Dichloroethane (Pries, F. (15) 279)

**Uptake**
Phosphorus removal; *Acinetobacter*; Polyphosphate; Biosynthesis; Degradation; Phosphate transport; Efflux (Kortstee, G.J.J. (15) 137)

**Virulence factor**
Lipase (EC 3.1.1.3); Mechanism of secretion; Interfacial activation; Three-dimensional structure; Biotechnological applications (Jaeger, K.-E. (15) 29)

**Wastewater**
Nitrification; Denitrification; $N_2O$; $N_2$ (Kuenen, J.G. (15) 109)

**Xenobiotics**
Biodegradation; Phosphorus metabolism; Sulfur metabolism; Global regulation (Kertesz, M.A. (15) 195)

**Yeast promoter**
*Saccharomyces*; Invertase; Nucleotide sequence; Glucose repression (Gozalbo, D. (15) 1)
